WORKING PAPERS

1. Housing and Human Capital: Condominiums in Ethiopia - with T. Getahun (**Job Market Paper**) [3ie Registry] *Presented at: ACLEC* (2023); *NEUDC* (2023); *Chicago Causal Inference Student Conference* (2024); *World Bank* (2024); *PacDev* (2024)

Abstract: Rapid urbanization has led to an urgent need for new housing in cities throughout the developing world. We use randomized evidence from the largest expansion of public housing in Africa to estimate the effects of housing on children's human capital. Children in households winning a random lottery for the ownership of a condominium unit in urban Ethiopia experience large gains in educational enrollment (4.5-11%), secondary school completion rates (10.5%), tertiary attendance rates (16%), and in measures of cognitive and socioemotional development. Heads of winning households experience an 8p.p. increase in formal sector employment rates, which increases household income. To unpack mechanisms, we use instruments derived from spatial variation in randomly assigned condominium locations and show that treatment effects are concentrated amongst households that own and occupy the unit that they win. A structural model allows us to characterize selection into condominium occupation, ruling out that policy impacts can be explained through a wealth effect alone. Our results suggest that effects of neighborhood residence are an important channel through which housing policy can improve children's outcomes and that in-situ development or an allocation mechanism accounting for household residential location would increase policy impacts.

2. Valuing the Time of the Self-Employed - with T. Baseler, S. Chassang, P. Dupas, E. Snowberg [NBER WP] [World Bank Blog] [R&R - Review of Economic Studies]

Abstract: People's value for their own time is a key input in public policy evaluations—these should account for time taken away from work or leisure as a result of policy. Using rich choice data collected from farming households in western Kenya, we show that households exhibit non-transitive preferences. As a result, neither market wages nor standard valuation techniques correctly measure participants' value of time. Using a structural model, we identify the behavioral wedges in participants' choices, and find that distortions appear when households exchange cash either for time or for goods. Our model estimates suggest that valuing the time of the self-employed at 60% of the market wage is a reasonable rule of thumb.

3. New Technology and Network Change: Experimental Evidence from Kenya [Draft available upon request.]

Abstract: How do village social networks respond to the introduction of a new technology? Using a new panel of social network data collected for a randomized controlled trial in Western Kenya, this paper shows that receiving a new technology significantly increases that individual's centrality within their network. This change is driven by individuals differentially maintaining existing network links and creating new network links with technology recipients, irrespective of their own treatment status. However, treatment does not induce detectable changes in overall village network structure. Applying these results to an extended model of peer-effects which accounts for endogenous network response to the intervention, I provide evidence that failing to consider endogenous network change overestimates the direct effect of treatment and underestimates peer effects. These results highlight the importance of policy-induced network change in treatment effect estimation.

In Progress

- Land Market Frictions, Technology Adoption, and Farm Profits with F. Kondylis, J. Loeser, J. Magruder [AEA RCT Registry - 0004697] [Data collection complete.]
- Sustainable Agricultural Intensification and Food Security Project with F. Kondylis, J. Loeser, J. Magruder
 [Data collection in progress.]
- 3. Self-timed Credit Contracts: Evidence from Kenyan Farmers with S. Chassang, P. Dupas, E. Snowberg [AEA RCT Registry 0002949] [Data collection complete.]
- 4. The Role of Information, Accountability and Resource Gaps in Urban Service Provision with P. Dupas [AEA RCT Registry 0002114] [Data collection complete.]
- 5. Wages, Labor Poaching, and Foreign Competition: Evidence from Ethiopia with G. Abebe [Pilot in progress.]
